

Pros Of Installing Air Powered Landing Gear For Women Truck Driver Retention

In the US trucking industry, almost every day, drivers do raise and lower landing gears. Most of the times; they do it with fully loaded trailers. Beyond question, this is a most demanding task in the trucking industry but at the same time risky. When drivers do this job with the help of manual landing gear system; they face many different issues, and one such is - musculoskeletal pain and injuries.

This type of tedious and even risky job can't be done for a long time, which is why female drivers hardly stick in this job. Many times male and aged drivers also leave their jobs due to the risk associated with manual landing gear operation. Keeping the issue in mind, especially for women Truck driver Retention Patriot Lift has come up with air-powered landing gears On-Life 2000 and 2000HD.

Today's trucking industry is fast-paced; bearing in mind the speed and efficiency, as well as reducing risk among truck drivers, air-powered landing gears produced by Patriot Lift is second to none! The benefits of using these automatic landing gear automation systems are as follows:

Productivity, men and women truck driver retention and safety, driver requirements and reducing workers compensation are some of the things that need to keep in mind very seriously, and to ensure the safety and productivity of the truck drivers, you must know the benefits you get using On-Lift 2000 and 2000HD.

- Significant reduction of workers compensation cost.
- Eliminate accident, pain on neck and shoulder, as well as musculoskeletal injuries.
- Improves drivers hiring and retention.
- These landing gears automation support EEO hiring since its operation.
- Raises and lowers the fully loaded trailers in less than ten seconds.

- Need no electric power source.
- No messy hydraulics, full air operated.
- Very easy to operate, for both men and women, which is why it is good for **women truck driver retention**

If you are planning to help to retain as well as recruit trained truck drivers, reducing damage to your equipment and saving space in the time you park trailers, then On-Lift 2000 and 2000HD would be the best automated trailer system for your company.

The best thing is – these two air-powered landing gear automations have extremely low up keep cost. You will be able to retain the crank as a back up as well. You can easily operate with high and low gear and operate under all weather conditions.

The next best thing is for which On-lift 2000 and 2000HD is high in demand these days are- these landing gears fit most types of landing gears and can easily retrofit with your old manual landing gear, if you want.

Last, but certainly not the least, due to its compact, yet light weight design, which weighs 9 lbs; it is one of the best landing gear automations at present market. You will get exclusive patented technology with 2-year manufacturer's warranty. What's more? If you want to reduce the workers' compensation cost, reduce the risk of raising and lowering fully loaded trailer and planning for women truck driver retention, look no further than On-Lift 2000 or 2000HD.
